

# Effective Disinfection: What Makes EnhancedClean™ Work

## The Tools, Technology, and Training to Deliver Healthy Spaces

Minimising the dangers of COVID-19 in offices, schools, airports, manufacturing and distribution facilities, and other facilities is a daunting challenge. We've combined ABM's longstanding expertise in facility services with knowledge from Public Health England, Wales, Ireland, and Scotland, and the guidance from infectious disease and industrial hygiene experts. This has produced a programme that's effective in limiting the surface-based spread of not only this virus, but also seasonal viruses and other common pathogens.

### Hospital-grade Disinfectants

All products used in EnhancedClean are for use against SARS-CoV-2, the virus that causes COVID-19. This means that these disinfectants have been proven to kill other human coronavirus types. This designation is the highest level of assurance that an anti-viral chemical is effective. Cleaning and disinfecting is more effective than cleaning alone.

### Electrostatic Sprayers

Designed to cover more surface area in less time, the periodic after-hours use of electrostatic sprayers goes beyond daily high-touch disinfection, especially for hard-to-reach surfaces. This, along with a thorough manual pre-cleaning, effectively resets your facility to as pathogen-free as possible.

### PPE (Personal Protective Equipment)

Keeping your people safe while our people work is important to us. The well-being of both our teams and yours is critical, so every EnhancedClean team member is always equipped with the right PPE to get their job done safely.

### Occupant Communication Signage Kits

Even the best disinfection program only works if occupants do their part, too. Even the best disinfection programme only works if occupants do their part with personal hygiene and social health practices. We can provide printed and digital signage to let people know disinfection is ongoing and to help promote social practices that keep everyone healthy together, like social distancing, handwashing, covering coughs and sneezes, and more.

### Training and Certification

All EnhancedClean team members, from our frontline workers all the way up to their supervisor's supervisor, are thoroughly trained and tested. This includes eLearning, classroom sessions, videos, knowledge checks, and more. Our testing of both knowledge and the physical disinfection processes lets you feel confident that every team member completely understands their part.

### New and Emerging Infection Control Technology

When there's a new and better way to get the job done, we're going to give it a shot. Our EnhancedClean programme will be continually updated not only to reflect current best practices, but we're also committed to piloting new and emerging technology like UV disinfection.

*ABM EnhancedClean™ Services are designed to reduce but not eliminate the risks of spreading infectious disease and viruses. There is no guarantee that the EnhancedClean Services or any cleaning services will completely eliminate the risks of spreading infectious diseases and viruses.*
